

DEVIKA GADE

Memphis, TN | +1(901) 512 - 0828 | devikagade09@gmail.com | [Portfolio](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full Stack Java Developer with 3+ years of experience building secure and scalable applications using Java, Spring Boot, Microservices, Angular, and React. Hands-on in designing REST APIs, integrating Kafka event flows, and optimizing database models for high-volume processing. Skilled in developing responsive UI components with TypeScript and RxJS and deploying containerized services on AWS using Docker, Kubernetes, and Jenkins CI/CD. Known for writing clean, maintainable code, improving test coverage with JUnit/Mockito, and contributing effectively within Agile teams.

TECHNICAL SKILLS

Programming & Backend: Java, J2EE, Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate, Microservices, REST API Development, Spring Cloud, Spring Batch

Frontend: Angular, React.js, TypeScript, JavaScript (ES6+), RxJS, NgRx, HTML5, CSS3, Bootstrap

Cloud & DevOps: AWS (EC2, S3, CloudWatch, EKS), Docker, Kubernetes, Jenkins, Maven, CI/CD Pipelines, Containerization & Orchestration

Databases & Storage: PostgreSQL, MySQL, MongoDB, Redis

Messaging & Event Streaming: Apache Kafka

Testing & Quality: JUnit 5, Mockito, Protractor, Jasmine, Karma, Postman, SonarQube

Monitoring & Logging: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana)

Architecture & System Design: Microservices Architecture, Event-Driven Architecture, Distributed Systems, API Gateways, High-Availability Systems, Scalable Application Design

Tools: Git, GitHub, GitLab, Bitbucket, Jira, IntelliJ IDEA, VS Code, STS, Docker Desktop

PROFESSIONAL EXPERIENCE

Java Full Stack Developer

Jan 2024 - Present

Carelon Health | Memphis, TN

- Developed and refined Spring Boot services in Java 17 to support Anthem's claims intake process, helping the platform handle 34% higher claim volume while keeping API response times stable during peak periods.
- Integrated FHIR and HL7 clinical data using Spring Boot adapters and validation layers, which reduced record mismatches and improved alignment with external EHR systems used by provider networks.
- Built Angular 14 components with TypeScript, RxJS, and NgRx to simplify eligibility and benefits workflows, reducing the number of clicks and transitions required for providers by 27%.
- Contributed to building microservices for claims and eligibility using Spring Cloud, Kafka, and Redis, decreasing cross-service delays and improving overall transaction flow by 22%.
- Implemented JWT-based authentication and role-driven access rules using Spring Security, supporting Anthem's HIPAA compliance requirements and improving audit readiness.
- Improved performance for document-heavy workflows by using PostgreSQL for transactional data and MongoDB for unstructured EHR files, increasing document retrieval speed by 40%.
- Supported CI/CD activities by containerizing Spring Boot applications with Docker and deploying them to AWS EKS through Jenkins pipelines, reducing deployment cycles to under 10 minutes.
- Helped improve production stability by setting up Prometheus/Grafana dashboards and centralizing logs in ELK, allowing faster troubleshooting and lowering MTTR by 25%.

Java Full Stack Developer

Jan 2021 - Jul 2022

BigBasket | Hyderabad, India

- Developed catalog, pricing, and checkout microservices using Java 11, Spring Boot, and Spring Cloud, improving cart retrieval speed by 38% during seasonal sale spikes.
- Built REST APIs to manage orders, item availability, delivery slots, and customer profiles using Spring MVC, JPA, and validation layers, reducing order failures caused by inconsistent data by 42%.
- Integrated external payment gateways and shipping partners by implementing secure connectors, webhook handlers, and retry mechanisms, lowering manual reconciliation tasks by 45%.

- Assisted in decomposing a monolithic order engine into microservices with service discovery, gateway routing, and distributed tracing, reducing deployment conflicts and rollback frequency by 58%.
- Improved high-volume order processing by creating Spring Batch jobs for daily inventory sync, price updates, and abandoned cart cleanup, reducing data refresh time from 4 hours to 90 minutes.
- Modernized the customer-facing storefront by developing Angular modules with Reactive Forms, RxJS, and Material UI, decreasing checkout errors and improving page interaction performance by 25%.
- Built Kafka producers/consumers for event-driven stock updates, updating warehouse and storefront inventory with 99.6% sync accuracy across daily loads.
- Hardened CI/CD pipelines with Jenkins, Docker, and Kubernetes on AWS, raising regression stability to 92%+ with JUnit, Mockito, and Protractor covering core checkout flows.

PROJECTS

Real-Time Order Processing & Inventory Management System

- Built a distributed order workflow using Java 17, Spring Boot, and microservices to handle order placement, payment checks, and live inventory updates, improving processing consistency during heavy order peaks.
- Implemented Kafka streams for order and inventory events and added Redis caching for high-volume lookups, reducing synchronization delays and cutting read latency under peak testing loads.
- Deployed containerized services on AWS EKS via Jenkins pipelines and created Angular/React dashboards with RxJS for real-time order visibility, helping support teams diagnose failed events more quickly.

Online Healthcare Appointment Booking System

- Built a full-stack appointment scheduler using Angular and Spring Boot to support patient booking, rescheduling, cancellations, and provider availability updates, improving workflow clarity for clinic staff.
- Developed REST APIs with Spring Boot, JPA, and MySQL to manage users, appointments, and schedules while adding JWT-based authentication in Spring Security to enforce role-specific access paths.
- Created Angular modules with Reactive Forms and reusable components and validated APIs with Postman and Maven builds, improving UI accuracy and ensuring stable application behavior across updates.

EDUCATION

Masters in Computer Information Systems

Aug 2024

Christian Brothers University | Memphis, TN

Bachelor of Technology in Information Technology

May 2022

Vignan's Lara Institute of Technology & Sciences | India

CERTIFICATIONS

- Java Programming and Software Engineering Fundamentals - **Coursera**
- Spring Boot 3 & Microservices Specialization - **Coursera**
- AWS Cloud Practitioner Essentials - **Coursera**
- Microservices Foundations - **LinkedIn Learning**
